## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, 7-8, 11, 17-20 and 22, drawn to a method for determining the presence of an activated catalyst site in a catalyst system comprising the steps of calculating difference values between the reference emission energy and the sample emission energy, on one hand, and between the reference lifetime and the sample lifetime, on the other hand;
  - II. Claims 32-37, and 40-43, drawn to a method for determining the presence of an activated catalyst site in a catalyst system comprising the step of calculating the activation index for the sample, in accordance with the formula recited in claim 32.

The inventions are distinct, each from the other because of the following reasons:

2. The inventions are distinct, each from the other because of the following reasons:  
Inventions I and II are directed to the methods of catalyst determination which are related, but independent and patentably distinct. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are

not obvious variants. See MPEP § 806.05(j). In the instant case, the methods, as claimed, have different modes of operation and are not disclosed as being usable together.

3. Because these inventions are independent or distinct for the reasons given above and because they s have a separate status in the art due to their divergent subject matter, restriction for examination purposes as indicated is proper.
